

**National Interagency Coordination Center
Incident Management Situation Report
Wednesday, May 28, 2014 – 0530 MT
National Preparedness Level 2**

National Fire Activity

Initial attack activity: Light (146 new fires)
 New large fires: 4 (*)
 Large fires contained: 2
 Uncontained large fires: ** 9
 Area Command Teams committed: 0
 NIMOs committed: 0
 Type 1 IMTs committed: 2
 Type 2 IMTs committed: 1

** Uncontained large fires include only fires being managed under a full suppression strategy.

Alaska Area (PL 3)

New fires: 6
 New large fires: 0
 Uncontained large fires: 1
 Type 2 IMTs committed 1

Funny River, Kenai-Kodiak Area, Alaska DOF. IMT 2 (Kurth). Started on FWS land five miles southwest of Soldotna, AK. Black spruce and hardwood litter. Active fire behavior. Numerous structures threatened. Evacuations in effect. Precipitation occurred over the fire area yesterday.

Predictive Services Discussion: Alaska will continue to see higher humidity and a chance of rain as low pressure moves east across the state. A Pacific low pressure system and associated cold front will bring scattered showers and isolated thunderstorms to the Intermountain West and Northern Rockies but warming will peak further south over California and the Southwest U.S. with dry, gusty winds. A slow-moving trough of low pressure over the Gulf Coast will result in heavy rain and thunderstorms from Texas to the lower Mississippi River Valley. A cold front will move east from the Great Lakes toward the Mid-Atlantic Coast with much cooler temperatures.

HAZARD TREE FELLING TIPS 1

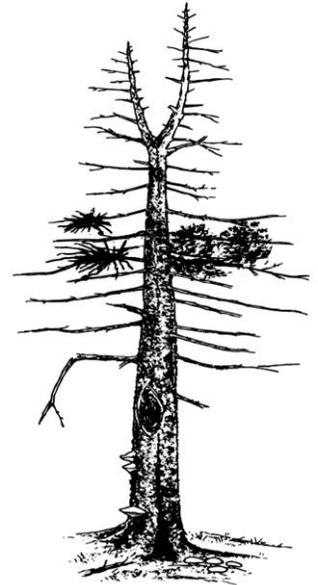

Felling Safety Category

Felling a hazard tree requires accurate risk assessment and complexity analysis, and demands the sawyer's full situational awareness. In all cases, remember to establish and maintain a secure felling area.

Do not bypass hazard trees without taking some action such as felling or establishing a No-Work-Zone.

Degree of hazard varies with tree size, species, and type/location of defect:

- Stem defects resulting in tree failure, i.e., collapse;
- Weakened sapwood resulting in loss of control when falling trees & limits solid wood for wedging;
- Overhead hazards, i.e., dead or hanging limbs falling on the faller.

Indicators of potential felling hazards:

Dead Limbs: limbs of all sizes and species with decay evident cracking, or loose hung-up limbs. Avoid working under overhead hazards.

Witches Broom: caused by mistletoe infection, limbs can grow very large and heavy (200+ lbs).

Split Trunk: cracked trunk from frost, lightning or wind. Visible evidence of advanced decay indicates serious weakness where the tree could fail.

Stem Damage: caused by windfall, scarring, fire, machine, and animal damage, as well as heart rot diseases.

Thick Sloughing Bark or Sloughing Sapwood: usually found on dead trees. Loose bark on Douglas fir or loose sapwood on wind snapped cedars can dislodge during falling.

Butt and Stem Cankers: usually found on deciduous trees but can occur on Douglas fir and pine. The infected areas weaken the stem.

Fungal Fruiting Bodies or Conks: found on stems may indicate massive interior rot 1 – 2 yards above and below conk. Excessive resinosis (resin flow) also indicates heart or root diseases.

Heavy Tree Lean: may be caused by damaged roots or lifting root mats, shallow or wet soils. In some cases, the tree may have corrected itself which can be determined by looking for corrected top growth.

Root Condition: look for any ground cracks around the base of the tree, signs of decay or fungal conks on the roots.

Cat Face: look for enough solid wood to construct an effective undercut and back cut.
